Mei Google Sheet Creation

April 23, 2022

1 Requirements

- Python
- Extraction and Conversion Scripts

2 Converting .bytes script files to .csv files

1. Find the .bytes files. If you used our extractor they are in the
   "extract/assets/assetbundle/bytes" folder.

2. Copy the scripts you want to the "HigurashiMeiScriptExtraction" folder

3. (optional - add translation for character names to the dictionary
   in "extract-lines.py")

4. Run "execute.bat". The .csv files will be created in the "out" folder

3 Create a Google Sheet

1. Copy one of the Google Sheets (ideally the template)

2. If you didn't copy the template, delete unnecessary sheet tabs

3. Rename the Sheet as you want

4 Uploading .csv Files to the Sheet

1. Click on "Data" (top left), then select "Import" and click on "Upload".

2. Drag first .csv file onto the window

3. Change "Create new table" to "Create new sheet(?)" and import

4. Repeat for all .csv files

5 Cleanup Sheet

1. Copy the Formatting of the "Template Sheet"
   (Click on the box between "1" and "A" then press "CTRL + C")

2. Paste the Formatting into each Sheet you imported
   (Click on the box between "1" and "A" then press "CTRL + ALT + V")

3. Add the file name (on the bottom) to the top left cell of every sheet.
   This is needed so they can be pulled with a script later

4. Check if everything looks correct
